SUMMARY

Junior Software Engineer with an MSc in Computer Science and a focus on building end-to-end software solutions. Experienced in modern full-stack development (React, Node, Python, Java) and cloud infrastructure, with a specialized interest in applied AI for efficiency gains. I prioritize clean code, testing, and system reliability over hype, having successfully delivered features in healthtech and edtech sectors. Looking for a role where I can apply my engineering rigor to solve real-world problems at scale. I actively use Trackr to manage my UK tech job search.

TECHNICAL SKILLS

- **Languages:** Python, SQL, JavaScript/TypeScript, Java
- **AI & Machine Learning:** RAG, Agentic AI, Multi-Agent Systems (LangGraph, CrewAI, LangChain), Vector Databases (Pinecone, Chroma), LLM APIs, Claude Code, Antigravity CLI
- **Full-Stack & Backend:** React.js, Next.js, FastAPI, Express.js, MySQL, SQLAlchemy, REST APIs, Redis, WebSockets
- **Cloud & DevOps:** AWS, Docker, GitHub Actions (CI/CD), Vercel, Fly.io, Hostinger
- **Software Engineering & Testing:** PyTest, Jest, Vitest, Playwright, Debugging, System Architecture, Agile methodologies

WORK EXPERIENCE

Software Engineer (Part-Time, Remote) | Curaflux (Healthtech)

Jan 2025 – Present • Remote, alongside MSc studies

- Co-developed backend services with the engineering team using Express.js and TypeScript to manage sensitive healthcare records with strict access controls and high reliability.
- Syncing with the product team to integrate WhatsApp booking and profile-viewing workflows, allowing healthcare professionals to access scheduling services directly through messaging.
- Partnered with cross-functional teams to translate business requirements into scalable features and manage AWS cloud infrastructure within a fast-paced agile team.

Frontend / Full-Stack Engineer | Tech Studio Academy (EdTech)

2023 – 2024 • Lagos, Nigeria

- Contributed to the development team to build full-stack features for the 10X Revenue e-learning platform using React.js, TypeScript, Express.js, and MySQL.
- Partnered with designers and developers to build Skicom from scratch, delivering mobile data purchasing workflows with Next.js, Zustand, and custom Express.js backend APIs.
- Partnered with the QA team to maintain test suites using Jest and Vitest to prevent regressions across high-traffic customer interfaces.

Frontend Engineer | WIIBI (Ghost Air)

Sep 2023 – Dec 2023 • Lagos, Nigeria

- Worked alongside the design and engineering teams to build responsive, mobile-first interfaces for a property platform using Next.js, Tailwind CSS, and Redux.
- Worked alongside the development team to implement Server-Side Rendering (SSR) and optimize data-fetching pipelines to cut page load times on listings pages.
- Joined forces with the engineering team to diagnose frontend performance bottlenecks and streamline API state management to ensure reliable search responsiveness.

Personal PROJECTS

Lexis — Multi-Agent Legal Research Engine

lexis.discoverbenix.com • github.com/Benjamin-chidera/Lexis---Client

- Purpose: Designed a multi-agent legal research system for legal professionals to cross-reference case evidence against external statutes and precedents using RAG workflows.
- Architecture: Built a concurrent AI pipeline using LangGraph for orchestration and CrewAI for agent behavior, utilizing Pinecone for high-performance vector retrieval.
- Impact: Reduced end-to-end processing latency by 50% and improved system usability based on direct testing and feedback from legal professionals.

GP Connect (Q-Zero / Mira) — Healthcare Triage & Clinical Research Platform

gp-connect.discoverbenix.com • github.com/Benjamin-chidera/Mira-Q-Zero-client

- Triage & Booking: Developed Q-Zero, an engine that translates inconsistent NHS API structures into unified workflows to route patients by postcode.
- AI Research (Mira): Built a clinical platform using LangGraph and CrewAI to process multi-modal data, incorporating human-in-the-loop validation for treatment research.
- Reliability & Auditability: Designed an append-only clinical ledger with lifecycle tracking to ensure data traceability and prevent silent data loss in AI pipelines.

Other Projects: Council AI, StudyM8, SayIT and additional engineering projects available on GitHub and discoverbenix.com.

EDUCATION

MSc Computer Science — University of Dundee

Jan 2025 – Jan 2026

BSc Business Administration — Caritas University, Nigeria

Sep 2018 – Dec 2022

CERTIFICATIONS & PROGRAMS

IBM RAG and Agentic AI Professional Certificate (Coursera), AI Engineer Bootcamp (Udemy), Full Stack Development – Backend (Tech Studio Academy), React / Next.js, React Native, MERN Stack, FastAPI (Udemy), JPMorgan Chase Software Engineering Virtual Experience (Forage, Nov 2025), JPMorgan Chase Code for Good Hackathon (Oct 2025), Volunteer JavaScript Lab Practice Assistant (University of Dundee, May–Jul 2025)
